

Making sure the code has run

My plot is empty  
so did not nail it!

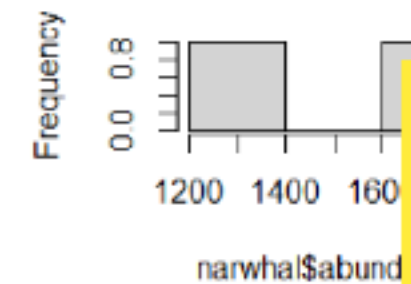

I misspell often and R doesn't like it

Learned the  
importance of  
checking your  
data after  
importing  
(head(), tail(),  
str()) and making  
sure the top row  
has been  
brought in  
correctly! ☐

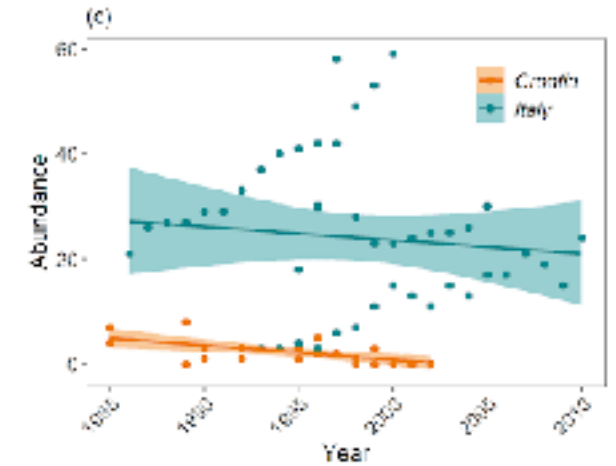

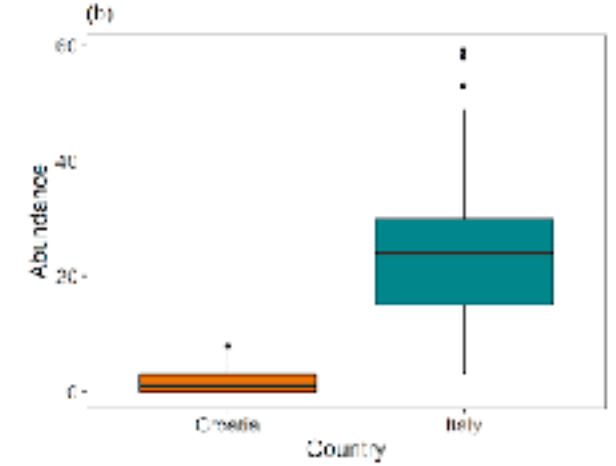

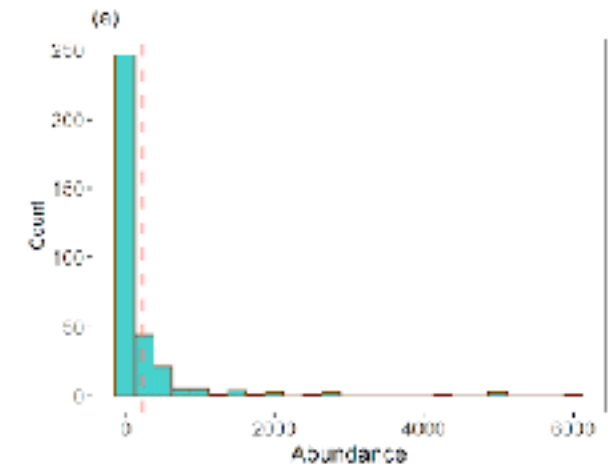

Nailed it!

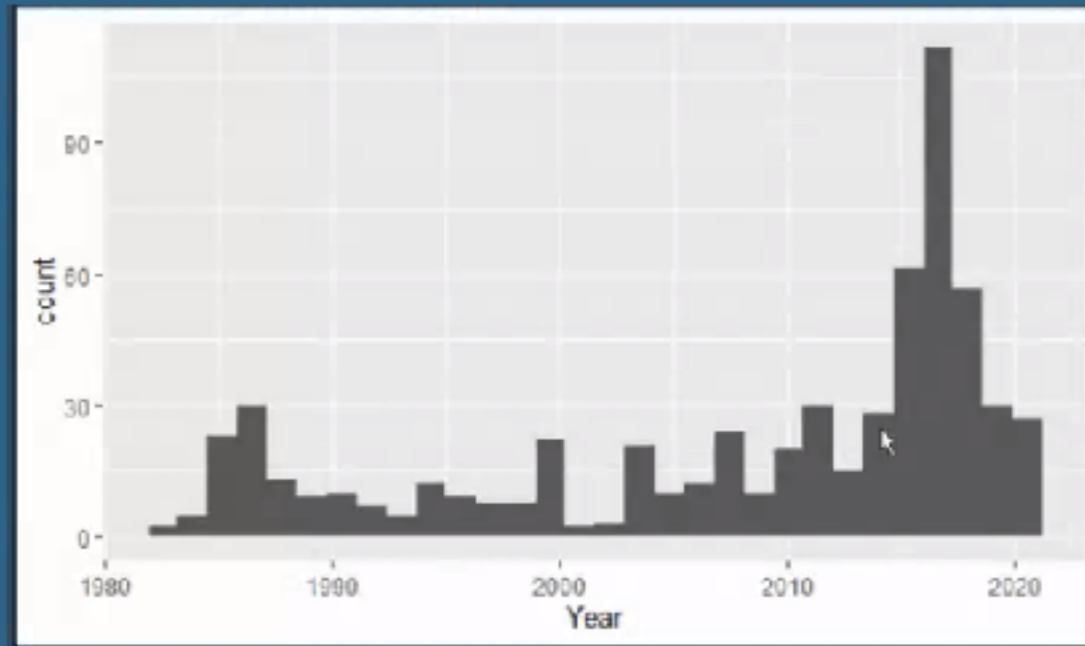

Histogram of narwhal\$abund

narwhal  
data was  
boring

brought in my  
data and  
made a few  
histograms  
and barplots!  
woohoo!

Feeling good  
that I was able  
to hop in late  
and make lots  
of plots!

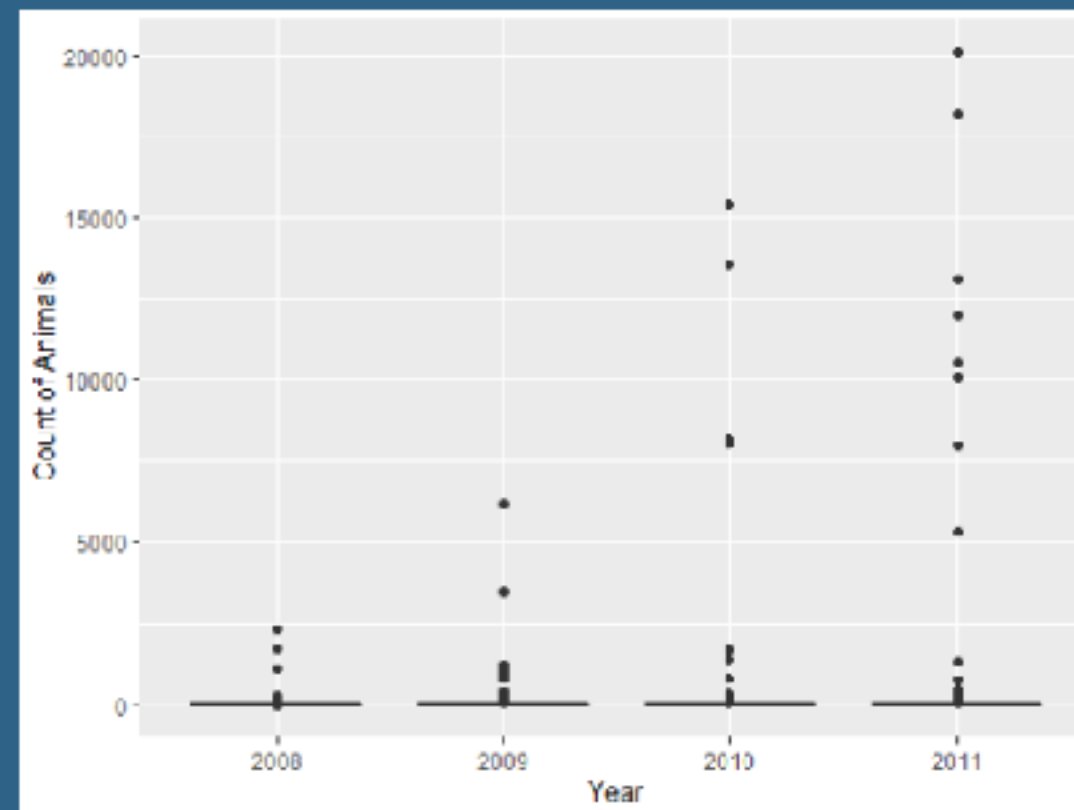

yay!

Nailed IT!

removed  
NAs with  
help from  
Diana and  
Chante!!

discovered `!is.na()`,  
`na_omit()`, `drop_na()`

R did what we  
asked it to,  
but we forgot  
to make an  
object to store  
what it did!

# Remember these? How'd we do?

Our workshop goals were:

> Feel confident working in the R/  
Rstudio environment (i.e., open and  
run someone else's script)

> Have some ideas about  
applications of R that are possible in  
your work

> Be able to bring data into R and  
perform basic manipulations

> Know where to go to answer your  
own questions & learn about new  
packages

## Nailed It!

**Greenman**  
01/14/2021  
"slow it down,  
sweep it out,  
simplify"

"Future me" could  
be as soon as  
tomorrow - by then I  
may not remember  
what I did. Good  
notes are key!

**Simplicity  
is  
beautiful**

Chante and  
Diana  
ROCK! this  
was such a  
fantastic  
workshop!!!

Thank you, Chante  
and Diana - this  
was a great  
workshop - self-  
paced work with  
Q&A was super  
helpful!

Nailed  
finding  
errors in  
my script,  
objects  
and  
directories  
- woot  
woot!!

Ran out of time to nail  
Rmarkdown- so still  
working on it!

Excellent use of  
time! Thank you!
